AlphaMobile

How it works

Jobs starting from your CRM are sent to the Field Service Team's devices. Service Reports are generated with Customer Signature Capture. AlphaMobile encompasses the whole service and installation cycle with Job Progress Tracking at every step.

Jobs created in your CRM are sent to the device. The Field Service Team can see all scheduled jobs and view high level information in the Job List on the device.

When service checklists are completed a report is generated which is attached automatically to the client's record in your CRM database for storage and reporting upon.

As the Engineer steps through the job, the time-stamped statuses are updated both on the device and in your CRM giving visibility into the job at any point of time.

When a job is completed the sign off is captured together with comments, expenses plus other relevant information. This is then recorded, updated, stored and displayed in the system in real-time ready for processing.
